

IK10+

TENNIS COURTS

The modular design of the IK10+ allows us to offer this fixture in a limitless number of configurations. One such arrangement is perfect for Indoor Tennis courts. The electronics channels and light bars are spaced to allow tennis balls to pass right through and the light bars are pointed up for indirect light projection.

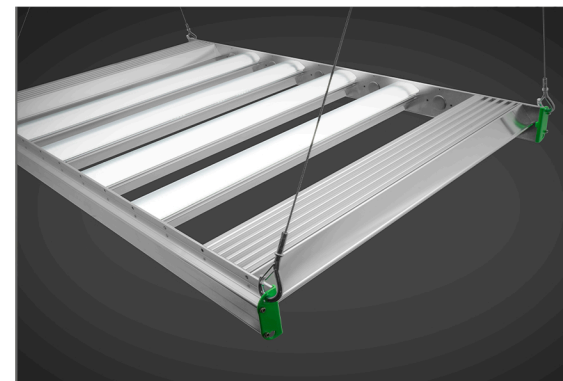

Extruded 6463 aluminum construction guarantees the IK10+ will suffer no damage from a stray ball shot or even a loose racket thrown in anger.

One last important factor when choosing the IK10+ Tennis fixture is light output and efficiency. As it is vital for an indoor tennis fixture to be indirect for player comfort, the IK10+ offers up to 200,000 lumens, providing even light across a large area.

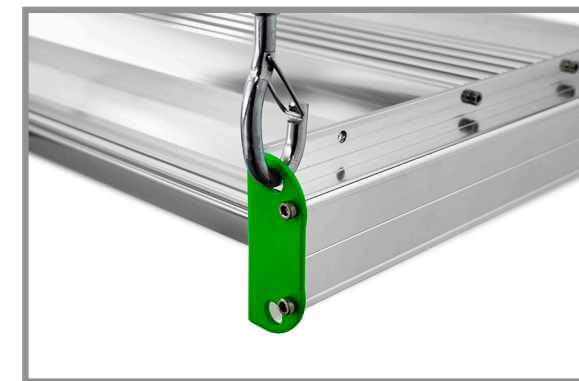

Beautiful Modular Robust

Built from extruded 6463 Aluminum and sourced right here in the USA.

All our fixtures are built and shipped from our headquarters in Reno, Nevada.

If you ever have questions or concerns, you can contact us directly.
